SUMMARY

Backend-focused Software Engineer with hands-on experience in building scalable microservices and real-time systems. Experienced in NestJS, PostgreSQL, Redis, and AWS, with strong background in computer vision and real-time data processing. Proven ability through internships and production-like projects.

WORK EXPERIENCE

Intelligent Online Learning Platform with Gamification

Internship - Woxa Corporation Ltd 2025

- Developed a microservices-based RESTful API backend using NestJS, PostgreSQL, Redis, Docker, and AWS for a gamified online learning platform
- Integrated Ai LLaMA 3 for automatic quiz generation and implemented WebSocket for real-time user activity tracking
- Configured Google OAuth 2.0 for secure authentication and managed cloud deployment on AWS

People Detection System

Internship - NT Khon Kaen 2025

- Built a real-time people detection system using Python, YOLOv5, OpenCV, and RTSP streaming, achieving sub-100ms inference latency
- Optimized model performance and pipeline processing for low-latency CCTV analytics
- Designed and developed a responsive dashboard for real-time monitoring of detection results

PROJECTS

Shopping Cart System

2024

- Built a responsive e-commerce cart system using Next.js with real-time state synchronization and optimized rendering
- Improved user experience across mobile and desktop through efficient state management and UI optimization

Student Activity Registration System

2024

- Developed a web-based event registration platform using PHP, MySQL, and Bootstrap
- Designed an admin dashboard for event management and participant tracking, improving registration efficiency by 40%

E-commerce Platform & Admin Dashboard

2023

- Built a full-stack e-commerce platform using PHP and MySQL with features including secure payment, inventory management, and order tracking
- Developed an admin dashboard to streamline operations and improve order management.

Restaurant Seat Reservation System

2023

- Designed and implemented a reservation system using C# to optimize seating allocation and reduce overbooking
- Implemented role-based access control for customers and administrators

EDUCATION

Bachelor of Computer and Information Science

Expected May 2026

Faculty of Interdisciplinary Studies, Khon Kaen University

- GPAX: 3.26
- Relevant Coursework: Software Development, Artificial Intelligence, Web & Mobile Application Development.

ADDITIONAL INFORMATION

- Technical Skills:** JavaScript, TypeScript, Python, PHP, React.js, Next.js, NestJS, REST APIs, WebSocket, PostgreSQL, MongoDB, Redis, AWS, Docker
- Languages:** Thai (Native), English (Intermediate)
